

Who We Are — Company & Founders

When an institute owner asks **"Which company is this? Who runs it?"** — open this and tell them directly. Everything here is true; say it plainly, never exaggerate.

Our vision: use agentic AI to solve the real problems that coaching institutes face — an AI layer for education.

TrigunAI Innovations Pvt Ltd does not come to sell a product. We first **understand the real problem** an institute has, then solve it with AI. Every institute's problem can be different — for some it's **making test papers**, for some **attendance**, for some **fee follow-up**, for some **tracking each student**. We are building an **agentic AI system** for all of these. We are not a "ChatGPT wrapper" — we build our own technology; our VR app is **already live on the Meta Quest store** (we ship real products, we don't just talk).

OUR FIRST HYPOTHESIS — WHAT WE ARE TESTING RIGHT NOW

Test / exam-paper generation + tracking each student's weak topics. This is our first solution — **Acharya**. We are checking it with institutes: *"Do you face this problem?"* If yes → we set it up free with Acharya and show you. And if your **bigger problem is something else** — attendance, fees, parent updates — tell us; **that could become our next AI solution.**

Rohan's real job = research, not selling. Goal of every visit: clearly understand **one real problem** the owner has. Ask — *"How do you make test papers today? Is that a pain? Apart from that, where does most of your time / trouble go?"* If Acharya fits that pain → free pilot. If it doesn't → log that problem; it may be our next solution.

The founders — who is building it

Deepak Kumar
CO-FOUNDER · CEO & CTO

Engineer-founder. Everything the customer sees — Acharya, test generation, student tracking — he builds himself and leads the team. He runs both the company's direction and its technology.

His simple rule: *"Solve a real problem with AI — build something that actually works, not just a demo."* Acharya too was built to solve a real problem that teachers face.

Rohan can say: *"The founder is Deepak Kumar — an engineer who builds the whole product himself. His focus is solving teachers' real problems with AI, which is why he meets institutes in person to understand them."*

Avinash
CO-FOUNDER

The second co-founder — works on the company's **research and new AI ideas**. Deepak handles the product and customers; Avinash focuses on upcoming technology.

Two co-founders, one small focused team — **the founder himself** sets up your institute, not a call-center.

Rohan can say: *"There are two co-founders — Deepak and Avinash. It's a small team, so they give personal attention to every institute."*

If the owner asks... — ready answers

"Which company is this?"	"TrigunAI Innovations — an AI company building tools for coaching institutes to make test papers and track students. The product is called Acharya."
"Who builds it / how many of you are there?"	"Two co-founders — Deepak (an engineer who builds the whole product himself) and Avinash (research). A small, focused team, so every institute gets personal attention."
"How old / how big is the company?"	"We're a new company — just starting with our first founding institutes. That's why you get a founding-partner price and extra attention." honest
"Are you real? Will you disappear?"	"We're a registered company (Pvt Ltd). Our VR app is live on the Meta Quest store — you can search 'TrigunAI' on Google. And payment always goes to the official company link, never cash."
"Why did you come / what do you want?"	"Not to sell — to understand your institute's real problem. Our vision is to solve education's problems with AI. The first thing we're working on is making test papers and

	<i>tracking students. If that's your problem, I'll set up Acharya free and show you; if your bigger problem is something else, tell me that too."</i>
"Where is your office?"	<i>"The team is remote-first; the founder sets you up personally. In Patna, I (Rohan) am your direct point of contact."</i>

3 rules Rohan never breaks (or we lose both trust and reputation):

- Don't say anything that isn't in this doc. If you don't know → *"Let me confirm and tell you."* Never guess.
- **Never say:** "thousands of institutes use it" / "results guaranteed" / any big false claim. We're a new company — that honesty is what builds trust.
- **Never take cash.** Payment only through the official TrigunAI link. The moment an owner says yes, tell Deepak the same hour.
