

Acharya — Student Exam-Prep Test Guide

A step-by-step walkthrough to test the whole student experience end-to-end, and note what works and what needs fixing.

Tester: Rohan **Test on:** acharya.trigunai.com **Time needed:** ~20–25 min **Date:** _____

What you're testing: Acharya's self-serve exam-prep product for students — they take a challenge, earn free days, sign in, and practise adaptive test papers (real IIT-JEE Physics style) that find their weak topics.

हिंदी: आप एक छात्र की तरह पूरा सफ़र टेस्ट कर रहे हैं — challenge दो, free days जीतो, login करो, और अपने कमज़ोर टॉपिक पर टेस्ट दो। हर step पर लिखो क्या सही चला और क्या नहीं।

Before you start:

- Use a **phone** (that's how students will use it) + a **Chrome/Safari** browser.
- Open in a **private / incognito window** so you test as a brand-new student.
- Have a **Gmail account** ready (to test Google sign-in). If Google fails, use the email option and note it.
- For each step: tick ☒ **Works** or ☐ **Problem**, and write a note if anything felt off.

 **How to give the most useful feedback:** pretend you are a 17-year-old student preparing for JEE/NEET. Would *you* trust this? Would you pay ₹199/month? Note anything confusing, slow, or that looks broken — even small things.

PART A — First impression (the front page)

1 Open the front page

Do: In a private window, go to acharya.trigunai.com

Expect: A page asking "Are you a student, or a teacher?" with two cards — a Student card and a Teacher card.

☐ ☒ Works ☐ Problem

.....

2 Enter the student side

Do: Under the Student card, tap "Take the challenge →"

Expect: The "Acharya Challenge — Win up to 60 days free" page opens.

☐ ☒ Works ☐ Problem

.....

PART B — The challenge (earn free days)

3 Pick a topic & start

Do: In "What do you want to be tested on?", type **JEE Physics** (or tap a suggestion), then tap "Start the challenge →"

Expect: After a few seconds, an **11-question test** starts with a ~5-minute timer.

☐ ☒ Works ☐ Problem

.....

4 Answer the questions

Do: Answer all 11 (get some right on purpose). Reach the end.

Expect: A result: "🎉 You earned X days FREE" + your score (e.g. 6/11).

☐ ☒ Works ☐ ✗ Problem

Note the questions: were they clear? sensible? any that looked wrong? →

.....

PART C — Sign in & claim (the important one)

5 Sign in with Google

Do: On the result screen, tap "Continue with Google" and pick your Gmail.

Expect: No error — you sign in and land on **your dashboard** ("My Acharya").

☐ ☒ Works ☐ ✗ Problem

⚠ If you see "Access blocked" or any Google error — STOP, screenshot it, and use the **email** box instead (type your email → "Claim my free access"). Note the exact error below.

.....

6 Check the dashboard

Do: Look at your dashboard.

Expect: "X free days left" (the days you earned), a "My topics" list with the topic you chose, an "Add a topic" box, and a "₹199/mo" plan card at the bottom.

☐ ☒ Works ☐ ✗ Problem

.....

PART D — Add a subject & open its detail

7 Add IIT JEE Physics

Do: In "Add a topic", type **IIT JEE Physics** and tap **Add**.

Expect: It appears in "My topics" (you can have up to 5).

☐ ☒ Works ☐ ☒ Problem

8 Open the subject

Do: On the "IIT JEE Physics" topic, tap **"Take test →"**

Expect: A page listing **chapters** (Kinematics, Modern Physics, Electrostatics, ...), each with **subtopics** you can tick, plus "Full subject test", difficulty, and number of questions.

☐ ☒ Works ☐ ☒ Problem

PART E — Build & take a real test (the heart of it)

9 Build a test

Do: Tick one or two subtopics (e.g. Kinematics → **Projectile Motion**). Choose difficulty + **5 questions**. Tap **"Create test →"**.

Expect: A "writing your questions..." message, then after **~1–2 minutes** the questions appear (real GPT-5 writing, so it is slow on purpose).

☐ ☒ Works ☐ ☒ Problem

i If a test ever fails to appear, just tap **Create test** again — it is a slow AI call and occasionally times out. Only note it if it fails **twice in a row**.

How long did it take to appear? _____ (1–2 min is expected). Too slow? →

10 ★ Check the maths renders correctly

Do: Read the questions carefully.

Expect: Equations, fractions and units look like **proper maths** (e.g. clean symbols) — **NOT** raw code like `\frac{a}{b}` or `\text{nm}`.

☐ ☒ Maths looks right ☐ ☒ Some looked like code

This is the most important thing to check. If ANY question shows raw code / broken symbols, screenshot it and note which chapter.

11 Finish & see the result

Do: Answer all questions. Reach the end. Tap "See the answers".

Expect: A score, your **weak vs strong** topics, and worked **solutions** for each question.

☐ ☒ Works ☐ ☒ Problem

i You may get **fewer questions than you asked for** (e.g. 3 of 5). That's normal — Acharya throws away any question too similar to a real past paper. Note it only if it happens every time.

Were the questions good quality — like a real JEE paper? →

12 ★ Check the diagrams

Do: Across the tests you take, watch for questions that include a **drawn diagram** (a circuit, a lens/ray sketch, a capacitor with plates). Try chapters like **Ray Optics**, **Current Electricity** or **Electrostatics** — they use figures most.

Expect: Where a question needs a figure, it appears as a **clean picture above the question text** — clear lines and labels, not blank or garbled.

☐ ☒ Diagrams look clear ☐ ✗ Blank / garbled ☐ — saw none

Screenshot any diagram that looks wrong and note the chapter. (Diagrams are a new feature — your eyes here are very useful.)

PART F — Progress & "what to practise next"

13 Check your progress shows up

Do: Tap "My dashboard", then open "IIT JEE Physics → Take test" again.

Expect: Now it shows "**1 test taken**", small **colour dots** on subtopics (red/orange/green = weak→strong), and a banner "**🎯 Acharya suggests: practise ...**" (your weakest topic).

☐ ☒ Works ☐ ✗ Problem

14 Use the suggestion

Do: Tap "**Practise it →**" in the suggestion banner.

Expect: That subtopic gets auto-selected — you can create another test on your weak area in one tap.

☐ ☒ Works ☐ ✗ Problem

PART G — A subject we haven't built yet

15 Try NEET Biology (not ready yet)

Do: Add a topic "**NEET Biology**" → tap "Take test".

Expect: A polite message: "**your paper is being set up — request submitted, coming soon**", plus a "take a quick AI test meanwhile" link. (Only IIT Physics is fully ready today.)

☐ ☒ Works ☐ ✗ Problem

PART H — Hindi

16 Switch to Hindi

Do: During any test/challenge, tap the **EN / हि** toggle at the top-right.

Expect: The interface switches to Hindi. (Note: the IIT Physics questions themselves stay in English.)

☐ ☒ Works ☐ ✗ Problem

YOUR FEEDBACK (the most valuable part)

1. Overall, how did it feel? (circle)

1 = confusing/broken · 5 = I'd happily use this

2. Did the maths and the diagrams render correctly? Which chapters (if any) looked broken?

.....

.....

3. How long did a test take to generate? Did the wait feel too long?

.....

4. Anything that BROKE, errored, or confused you? (list each with the step number)

.....

.....

.....

5. Were the questions good quality — like real JEE papers? Any that seemed wrong?

.....

.....

6. As a student, would you pay ₹199/month for this? Why / why not?

.....

.....

7. The single MOST confusing thing:

.....

8. Top 3 things to fix or improve:

.....

.....

.....

⚠ Please don't generate hundreds of tests — each one uses paid AI. A handful across different chapters is plenty to test it well.
