

TRIGUN INNOVATIONS

A PRODUCT OF TRIGUNAI

LIVE COHORT 1 · 3-MONTH SCHEDULE

Build Agentic AI Systems

Build a real AI agent that does a real job of yours — live, over 3 months.

STARTS

Fri, 26 Jun 2026 · 5:00 PM

LIVE EVERY

Fridays · 5:00 – 6:30 PM
IST

WHERE

Google Meet (link in
WhatsApp group)

RUNS UNTIL

18 Sep 2026

How it works — the flipped model: before each week you watch that module's video (~30–60 min). The live 90 minutes are for **building and debugging your own code**, not re-watching. Everyone starts from the same starter repo but automates **your own** real workflow. By Demo Day you have a working, deployed agent — plus the patterns to build the next one.

The 13-week schedule — every session is a Friday, 5:00 – 6:30 PM IST

DATE	WK	MODULE	WHAT WE DO IN THE LIVE SESSION	WATCH BEFORE
26 Jun	0	Kickoff	Orientation · get your API key working live · fork the starter repo · pick your use-case	<i>Just bring your laptop</i>
03 Jul	1	What an agent actually is	Map your use-case to goal → actions → stop; the loop on a whiteboard	<i>Module 1 video</i>
10 Jul	2	Your first tool-calling agent	Live-code the agent loop; everyone lands their first tool call	<i>Module 2 + run run.py</i>
17 Jul	3	Tools & integrations	Connect YOUR real tool — inbox, sheet, files, web search	<i>Module 3 video</i>
24 Jul	4	Memory & context	Add memory to your agent; retrieval (RAG) basics on your own docs	<i>Module 4 video</i>
31 Jul	5	Planning & multi-step	Task decomposition, ReAct, reflection & self-correction	<i>Module 5 video</i>
07 Aug	6	Catch-up & integration	No new module — get your agent doing a real 5-step job end-to-end	<i>Finish pending modules</i>
14 Aug	7	Reliability & guardrails	JSON validation, retries, human checkpoints, cost control — debug live	<i>Module 6 video</i>
21 Aug	8	Multi-agent systems	Orchestrator + worker agents; when multiple agents truly help	<i>Module 7 video</i>
28 Aug	9	Deploy your agent	Run it on a schedule on a server, with logging you can read	<i>Module 8 video</i>
04 Sep	10	Ship a real business agent	Package it, hand it to a non-technical user, measure time saved	<i>Module 9 video</i>
11 Sep	11	Capstone build	Office-hours format — polish your own agent for Demo Day	<i>Bring your agent</i>
18 Sep	12	Demo Day + certificates	Each student demos their working agent · certificates awarded	<i>Final agent ready</i>

HOW EACH WEEK WORKS

Inside each 90-minute live session

TIME (IST)	BLOCK	WHAT HAPPENS
5:00 – 5:10	Wins & blockers	Each student: what you built this week, where you're stuck
5:10 – 5:30	The hard part	The one tricky concept the video can't carry — taught live, with code
5:30 – 6:10	Live build / debug	We build this week's pattern, or debug YOUR actual agent on screen
6:10 – 6:25	Your assignment	This week's build on your own project + the next module to watch
6:25 – 6:30	Cost check & wrap	Check your API spend; questions; next session reminder

Your weekly rhythm

- › **Before the session:** watch the module video (≈30–60 min)
- › **Come having tried:** attempt the week's build, note where you're stuck
- › **In the session:** we unblock you and build live
- › **After:** finish your build · ~3–4 hrs/week between sessions

Support between sessions

- › **WhatsApp group:** Post in the WhatsApp group anytime — replies daily by 10 PM IST
- › **Office hours:** Tuesdays · 8:00–8:30 PM IST (optional drop-in)
- › **Recordings:** every session is recorded — catch up anytime
- › **Share your work** & resources in the WhatsApp group

What you need to start

- › A laptop (Windows / Mac / Linux)
- › An API key — Claude or OpenAI (we set it up with you at Kickoff)
- › The starter repo — shared at Kickoff
- › Provided API / GPU access for the heavier modules
- › Light Python helps, but the agent writes most of the code

How you earn your certificate

- › Attend at least **10 of 13** live sessions (recordings count if watched within 48 h)
- › Ship your **capstone agent** at Demo Day (Wk 12)
- › Complete payment (full, or all 3 EMI installments)

What you walk away with

- › A **working, deployed AI agent** automating a real workflow of yours — running on a schedule
- › The **patterns & starter code** to build the next agent for any task
- › A **completion certificate** and a project you can show an employer or client
